UVEX® Rx SAFETY EYEWEAR *(formerly TITMUS)*

NEW PRODUCT INTRODUCTIONS

Date: December 2010
From: Michael Franz – Sr. Product Manager
Re: **New Product Introduction: Titanium Collection – Titmus EXT13**

The Titmus EXT13 is the first Safety Titanium Collection styles to feature the exciting "memory metal" technology seen in many dress eyewear frames today. This technology, used in the bridge and temples, reduces stress on the end pieces and eye wires and allows the frame to flex without altering the fit or compromising the integrity of the frame. The result is extremely flexible, lightweight eyewear that offers long-lasting comfort and trouble-free wear for years to come.

- Titanium construction assures superior strength-to-weight ratio for lightweight and comfortable wear.
- Titanium "memory metal" temples provide outstanding flexibility for reduced eye-wire stress.
- Handmade and fashion-coordinated temple tips finish this contemporary design.
- Offered in an up-to-date range of color options for a sophisticated look.
- Eye wires use the "N-Tite® System" for a sleek profile and an attractive appearance.
- The new CS13 shield features the patented "flex" design for no-stress performance and more comfortable wear.

Like all Uvex® Rx products, these frames meet the latest ANSI Z87.1 Standard.

Description	Size Availability	Color Availability	Suggested Resale Price
Titmus EXT13	51.18.140	Taupe - TPE	$97.99
